Business Requirements Document

Project:

Retail Sales Analytics using Global Superstore Dataset

Prepared By:

Suriya

Version:

1.0

Date:

15 July 2026

1.Project Overview

Project Name : Retail sales analytics using global superstore dataset

Purpose: The purpose of this project is to analyze retail sales data and generate meaningful business insights. The project focuses on understanding sales performance, profitability, customer purchasing pattern and regional sales trends. The analysis will be performed using SQL, Python, Microsoft Excel, and Power BI to support business decision-making.

2.Business problem

The company collects sales transaction data from customers across different regions. However, management faces challenges in understanding business performance because the available data is not presented in a meaningful and interactive format.

- Difficulty in tracking overall sales performance.
- Difficulty in identifying high-performing and low-performing products.
- Limited visibility into customer purchasing patterns.
- Manual reporting consumes significant time.
- Lack of interactive dashboards for decision-making.

3.Business Objective

- Analyze overall sales and profit performance.
- Identify top-performing and low-performing products.
- Understand customer purchasing behaviour.
- Compare sales performance across regions and categories.
- Evaluate shipping performance.
- Develop interactive dashboards for management.

4.Stakeholder

Stakeholder	Role
Ceo	Reviews overall business performance
Sales manager	Monitors sales performance
Finance manager	Tracks revenue and profit
Regional manager	Reviews regional sales
Operations Manager	Monitors shipping and order fulfillment

5. Key Performance Indicators (KPIs)

KPI	description
Total sales	Total revenue generated
Total profit	Total profit earned
Total orders	Number of customer orders
Total customers	Number of unique customers
Average order value	Average revenue generated per order
Profit margin	Percentage of profit earned

6.Business questions

Sales

- What is the total sales revenue?
- What is the total profit?
- Which region generates the highest sales?

Products

- Which products generate the highest sales?
- Which products generate the highest profit?

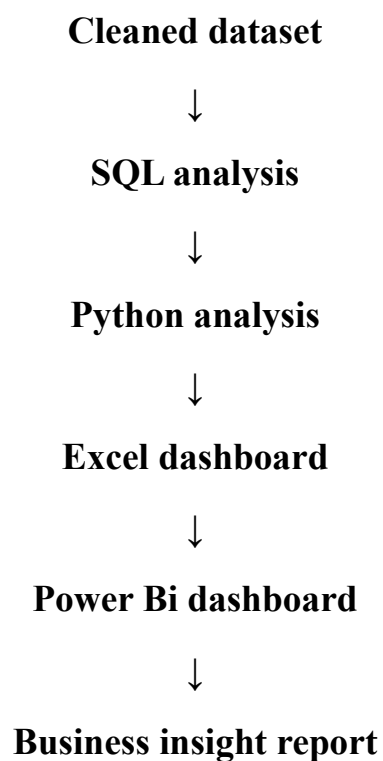

Customers

- Who are the top customers?
- Which customer segment contributes the highest revenue?

Shipping

- Which shipping mode is most frequently used?

7.Expected Deliverables

8.Conclusion

This project aims to transform raw retail sales data into meaningful business insights. By analyzing sales, profit, customer behavior, product performance, and regional trends, the project will help support better business decisions through SQL, Python, Excel, and Power BI.
